

Although this window system is designed with affordability in mind, Alutech's Horizon suite certainly doesn't fall short when performing to Western Australia's extreme conditions.

Like its bigger brother the "Evolution" series, the Horizon Window is available in a 90mm or a 50mm option. A practical suite featuring a Single Sliding Window, Double Sliding Window with the ability to perform to AS 4055 - 2006 C4 requirements.

An outstanding design feature unique to Alutech's Horizon is the purpose designed "707" subframe. This subframe design enables the effortless fitting of Cyclone & Security screens & features an improved nailing fin for quick & solid installation. Horizon is a brand new system, modern & stylish with consistent straight lines for a smart uniform appearance.

As an extra option the "E298" is an Alutech internal Face Fixed Flange. When installing windows it's an excellent solution to internal finishing & is able to suit many differing wall thicknesses & styles. It can be supplied loose & is easy to fit, with all fixings completely concealed. E298 is very effective for new or retrofit projects.
