Snake Removal & Control

Do you need to get rid of a snake? Don't worry. At Termitrust we know pests so you don't have to.

Removing snakes from in or around in your home or business is not job for amateurs. Whilst not all snakes are venomous, no one should take second chances with snakes.

A professional removal by Termitrust is your best choice to get rid of a snake in or around your home. We remove snakes with specialised snake catching equipment and depending on the species, release it into a large secluded bushland area or wetlands. An inspection of the immediate area will be carried out to ensure that no other snakes remain. We will offer recommendations for prevention and proofing.

Most importantly, we know snakes in your area. We have pest technicians on the ground in the following key locations and other surrounding regions:

QLD - [Brisbane](#), [Gold Coast](#), [Sunshine](#)

[Coast](#), [Ipswich](#), [Toowoomba](#), [Cairns](#), [Rockhampton](#) & [Mackay](#)

NSW - [Sydney](#), [Central Coast](#), [Newcastle](#), [Hunter](#), [Port Macquarie](#), [Coffs Harbour](#) & [Dubbo](#)

VIC - [Melbourne](#)

WA - [Perth](#), [Mandurah](#), [Bunbury](#) & [South West](#)

SA - [Adelaide](#)

A few of the common problem snakes are:

- *Eastern Brown Snake*

Whilst usually a uniform shade of brown, the Eastern Brown snake can have various patterns including speckles and bands. The range in colour from a very pale fawn through to black, including orange, silver, yellow and grey. Their belly is a light cream colour, often with orange blotches. The Eastern Brown Snake rates number two on the world's most venomous snake list and are found throughout the east coast of

Australia.

- *Dugite*

The Dugite snake is commonly found in the south west of Western Australia and southern South Australia. A full grown adult can be up to 2 metres in length. Their overall colour ranges from brown to olive brown to brownish grey, with irregular black or dark grey spotting. Eastern and southern individuals are more heavily spotted and sometimes becoming totally dark. The Dugite has made itself at home around urban and semi-rural areas, drawn to the prevalence of the house mouse, its favoured prey.

- *Tiger Snake*

Tiger snakes, found in the south of the southern Australian states, are prevalent mainly around wetland areas. The Tiger snake is one of the most venomous snakes in Australia and, indeed, the world. They can grow up to 1.2 metres in length. They have prominent yellow and black cross-bands; however, not all have this pattern. Others are dark olive brown to blackish-brown, with off-white to yellowish cross-bands.

Did you know snakes...

- Can expand the capacity of their jaws due to an elastic jaw ligament
- Have poor eyesight but have heat sensors that can pick up vibrations
- Can tell the difference between temperature changes and body heat from prey using these sensors
- Are meat eaters
- Don't have eyelids
- Can't chew food so they have to swallow it whole
