BOOMSPRAYING

FLETCHERS WEEDAWAY has boomspray equipment to suit all situations and conditions from small to large . For work on yards , small paddocks and acreages , orchards and difficult to access areas an **ATV with 3.5 Metre boom** is used in most cases . This can also be utilised on larger areas and paddocks with low density of weed as is sometimes required rather than running less accessible and less fuel efficient ones where the surface may be soft or less firm . The boom runs air inducted jets so to minimise drift and utmost care is taken not to damage existing pasture during application . The management in there discussions with you on quotation will advise of any requirements regard to stock removal and to when they can be returned to the area being sprayed. Records of wind direction and speed , as well as chemicals used during application are recorded and records held by us as is required by law and good practice at our office at Carboor.

For larger areas our **Landcruiser is equipped with an 12 metre boom** and this gives us the most efficient coverage for larger acreages and large paddocks and this boom can also **be shortened if required to 8 metre** for better access to smaller areas and if country is rough and has depressions or undulations . This machine is also fitted with air inducted jets to minimise drift and foam marker and GPS for the maximum efficiency of operation. Our operators travel at realistic speeds to maximise plant take-up of chemical and the utmost care of your pastures and paddocks and as above the same recordkeeping and stock procedures apply.

We recommend that for maximum efficiency and output from your land that an agronomist assess your property tho this is not essential and if the need arises we can recommend one in your area if needed.

FLETCHERS WEEDAWAY operators and employees are qualified and accredited and an assessment of the sprayed work is usually done within 2 weeks of the completion of your job. Feel free to call for any queries on the job or routine anytime. as we are available always to answer your questions and for your free on farm assessment prior to your work starting. A farm monitoring service is available to check periodically on the condition of your weed situation and formulate a response [**See Other PDF on Farm Monitoring service**]

If we cant do it , or we feel it can be done more efficiently another way we will happily recommend a **competent** operator with the capabilities and equipment to suit your requirements
