

CCTV CAMERA INSPECTIONS

Never let your plumber dig and renew your sewer or stormwater pipes just because a blockage cannot be cleared, instead ask for the problem to be diagnosed with a CCTV Camera.

With its specialised equipment Aquatek has found that 95% of blockages in sewer lines can be cleared without digging or having to carry out expensive pipe renewal. We can also provide CCTV inspections (our eyes underground) and very accurate diagnostic reports in addition with DVD recordings to show the current conditions of pipe work.

Aquatek Australia Drain Camera Inspections systems offer a complete CCTV survey configuration using either a Remote Control Tractor CCTV Camera or a wide range of other specially developed CCTV cameras. We can provide a full colour video inspection service on all conditions and most pipe classifications.

CCTV inspections can be performed in pipe sizes ranging from 25mm up. All cameras can be accurately tracked from above and the position of any defects or blockages can be marked for future reference or rectification.

Reporting Technology

Aquatek Australia can provide a detailed report of your survey with our findings and recommendations, recordings of CCTV Camera inspection will determine the pipeline condition & status. All information is burnt to DVD or memory stick.
