

SPOT CHECK

Concerned about 1 or 2 spots? Book in for a single consultation with our skin doctors.

SKIN CHECK

A skin check is an examination of the entire body where a dermatoscope can be used as a tool. Dermoscopy is a skin screening tool to diagnose skin cancer which helps doctors visualize and evaluate moles and other skin lesions that can't be seen by the naked eye.

MAPPING

A Mapping appointment includes a thorough Skin Check using dermoscopy. Your body is photographed systematically from head-to-toe with the Fotofinder machine for mole comparison in the future.

FURTHER TREATMENT

If abnormal lesions are identified by your doctor, you may be advised to return for a biopsy/excision. Cryotherapy, using liquid nitrogen is also an effective way to treat several skin conditions, including Actinic Keratosis, commonly known as 'pre skin cancer'.

Central Clinic welcomes
Dr Lisa Mathews & Dr Bihag Bhatt
to our team of GP's.

REGULAR GP CONSULTATIONS
New patients: 30 minutes
Reviews: 15 minutes

170 Normanby Street, Warragul
