

## Preventing Storm Damage

### Are you ready for the upcoming storm season?

Brisbane can experience damaging storms from late October through to February, experiencing hail and severe wind gusts.

### **PREVENTION IS ALWAYS CHEAPER THAN CURE.**

Our staff will inspect your trees, determine the potential risk to your property and recommend the best course of action for your continued protection.

What to look for:

- Previous storm damage that increases risk
- Unstable root system and soil erosion
- Proximity to houses and power lines
- Presence of fungal bodies and disease
- Structural defect and heavy foliage

The Tree Doctor will provide a free quote for all work that needs to be done.
