# Frequently asked Questions

**How often is the water delivered?** Deliveries are usually made between 8.30am to 5pm Monday to Friday. Closed all public holiday and weekends. Bottles are available at agent afterhours list of agents are on our facebook page.

**How can I pay for a delivery to my door?** We have lots of different ways. Most popular is credit card over the phone M/C or Visa, Cash, become a pre-paid customer so you can pay online. We do have accounts but only for business or minesite.

**What time is the cut off for deliveries the same day?** Cut off is around 12 - 2pm depending on the season. Summer alot earlier as busier. We do have an answer machine that you can leave a message 24/7 and you will then go on the next run list or can email us on gswco@westnet.com.au

**What size bottles do you have?** Our watercooler/dispenser are 19ltrs or we also have a smaller 15ltrs as well. Our boxed bottles 600ml (box of 24), 1.5Ltrs (box of 10), 5Ltrs (box of 4) and also a 10ltr bottle this has its own valve tap on it.

**I have kids that want to play with the taps. Is there any way of locking the taps?** We do have spare hot tap that you can purchase and put onto your watercooler. These have a safety lock on them which stops little kids from burning them selves, but also can work to stop kids playing with the tap too.

**Where does your water come from?** Our water is from a natural underground spring that was found by Mr William Gibson in 1894 in Gibson WA.

**What is the PH level of your Water?** Our level ranges from 6.9 to 7.2 depending on the season.

**Do you add anything to your water?** No we don't add anything to our water. We do run the water though extensive filtration system to filter out any impurities that may be in the natural spring.

**How do I become a Gibson Soak Water Company customer?** The easiest way is to contact the office 08 90227800 or email gswco@westnet.com.au. You can become a customer the same day (if before 12pm) and be enjoying the natural pure spring water in your own home or work place that day.

## History of Gibson soak

In 1892, gold had been found at Dundas now South of Norseman and it was the beginning of the Goldrush Boom. Gold was discovered at Norseman in 1894. This brought about a huge demand for freight cartage from port of Esperance to the Goldfields. The only transport to the Goldfields from Esperance was over dry and thirsty roads scarred with the ruts of the Horse and camel teams.

One such team was the Gibson's family. On the journey from Esperance, about 10 hours out, they camped the night. Teamster's son William Gibson was sent to round the horses early in the morning and came across a patch of rushes. He found the soil around the rushes moist so he proceeded to dig down and found signs of water. Rushing back to camp he excitedly began to tell him father and the other teamster's of his discovery. At first, nobody in the camp would believe him. Eventually they went to have a look, dug down and found sweet pure water. And a little bit of Western Australian History was made. The place became known as "Gibson's soak".

By 1896 the WA Government had taken over the site and had a well sunk at the site with a windmill and large steel overhead tanks erected and were charging fees for the water. The charge for the water in those days being:

- A drink for Horses - Sixpence (five cents)
- A drink for Camels - One shilling (ten cents)
- 100 Gallons to take away - Ten shilling (one dollar)

The soak was heavily used by the Cobb & Co, horse & camel teams, coaches and mail coaches many of which used Gibson as a Horse changing station. By this time "Gibson 's Soak" had become a small town with the opening of a way side inn where food and drink could be acquired by travellers.

In 1896 the name was changed to the Gibson Soak Hotel when proprietor Henry Jenkins brought the inn and was opened for business on Christmas day. By the 1950's the soak's surface water had dried up and today only deep underground the water remains.

Mr William Gibson died in 1918 aged of 45 years at Windham on Christmas Day whilst contracting to build the Abattoirs - quite unaware that he was in any sense a Pioneer.

In 1992 local resident Wayne Brennand established a spring water bottling factory using the pure spring water for his product that William Gibson discovered so long ago. He named the bottling factory after William Gibson hence the name Gibson soak Water co.

Even today, the small town site of Gibson (population 190) still depends on the water supply for their daily needs. The water authority now controls the site where the water supply was first found.
