

PLASTIC BOTTLE RECYCLING

At Hampshire Recycling, we take the three main types of plastic bottle, which are clearly marked on the individual container.

- **Polyethylene Terephthalate (PET)**
PET plastics are commonly used to make soft drink and water bottles. Polyethylene terephthalate plastic is clear and melts at 80° Celsius.
- **High Density Polyethylene (HDPE)**
HDPE plastic used to make juice and milk bottles, on the other hand, is opaque with a waxy surface; often coloured and melts at 75° Celsius.
- **Polyvinyl Chloride (PVC)**
PVC is strong, often clear and used to make some fruit juice bottles with a melting temperature of 80° Celsius.
