

GET YOUR POOL READY FOR SUMMER

JIM'S POOL CARE HINTS & TIPS

Get your pool water tested:

Testing your water regularly will prevent nasty surprises and unexpected bills.

Balance your water:

Untreated water can be a health threat and an eyesore. Balancing your waters chlorine, pH and alkalinity will keep things healthy and clean.

Clean your filters:

Neglected pool filters can reduce the cleanliness of your pool and the effectiveness of the filter itself, so use the change in seasons as a reminder to give it a clean.

Empty all skimmer and pump baskets:

Clogged baskets mean your pump has to work harder to cycle the water, so remember to empty them regularly.

Increase pool running times:

Your pool system should be left on long enough to cycle through your pool water at least twice a day, which can take anywhere between 6 and 8 hours.
