SHADEFORM

SAILSHADES & ARCHITECTURAL RIGGING

www.shadeformsails.com.au

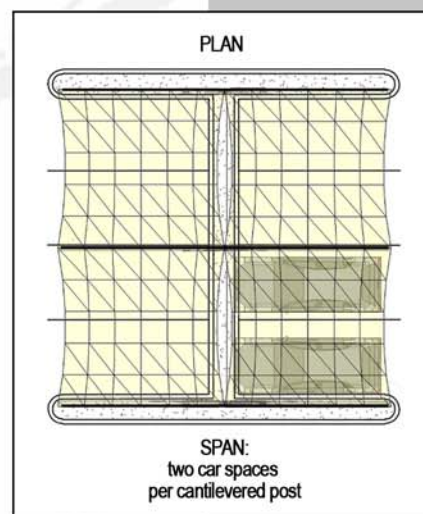

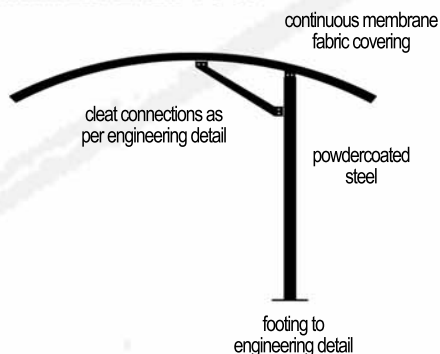

MATERIALS & CONSTRUCTION

Shadeform's structures are all custom made to suit the unique application and location, however with the modular cantilevered post system, car park shading can be generated with ease of design and construction.

All steelwork used in the construction of Shadeform's structures is powdercoated to the colour of your choice. We use only the highest marine grade stainless steel fittings and fixings to hold the tensioned sail shapes to ensure structural integrity and longevity.

CANTILEVERED POST

FABRICS

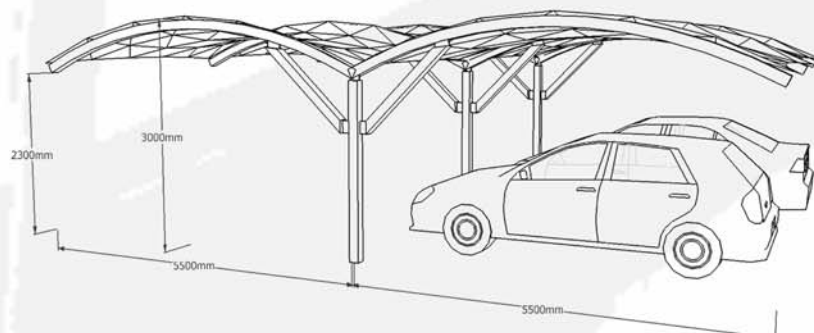

A wide range of fabrics are available for use in sail shading and modular membrane structures including:

Shadecloth - Commercial grade knitted shadecloth fabric.

90% Polyester Mesh - A premium fabric used in many domestic applications. Weldable seams for increased strength and eliminates UV degradation of stitching.

Waterproof PVC Coated Polyester - 100% waterproof fabric with structural strength. (conditions apply)

(All of the above fabrics are fire retardant and carry a 5 year warranty)

WARRANTY

Shadeform offers a 3 year warranty on all manufacture and installation of products.

90% Polyester Mesh Fabric has a 5 year warranty against UV breakdown and for fabric under tension - approximate 10 year lifespan.

95% Coolaroo Kitted Shadecloth has a 10 year manufacturers' warranty against UV degradation only, (no warranty under tension).
