THE PROOF IS IN THE TEST
Science in Action™
Why EXTERRA Is The World’s Most Effective Termite Baiting System

The EXTERRA Termite Interception and Baiting System has established itself as the elite standard in termite management. EXTERRA is founded on solid background science and only EXTERRA has remained true to the science effectively exploiting the biology of termites in a manner no other system matches. While EXTERRA focused on Science in Action to ensure that the termites are back. This is why you need the certainty of colony elimination from EXTERRA.

Termite Interception Zone
This is unique to the EXTERRA system and patented. Soil micro-organisms work with Focus Termite Attractant™ to produce the natural gas that termites use to find their preferred food. This natural attractant is generated in the soil to direct the termites into the EXTERRA In-ground Stations, instead of your home! So, whilst with every other termite baiting system the termites have the opportunity to pass between their small stations and find their way into your home; this is not so with EXTERRA. EXTERRA with Focus Termite Attractant creates the unique Termite Interception Zone to direct the termites into the EXTERRA Stations instead of your home! Science in Action™.

The Largest Stations
Independent research has consistently proven that termites prefer a larger food source™. EXTERRA leads the industry with the largest stations. The EXTERRA Termite Interception and Baiting System has established itself as the elite standard in termite management. EXTERRA is founded on solid background science and the science has remained effective. Unique, Patented, No Disturbance Design
Only EXTERRA’s In-ground Stations have a patented hollow core cavity so that the Stations can be inspected and termite bait added without disturbing the termites. This ensures that the disturbance sensitive termite species of this region are not disturbed and the feeding transition to the EXTERRA bait occurs flawlessly. It is well documented in the scientific literature that termites will vacate smaller Stations, before colony elimination occurs™. Sadly for you, this often means that unscrupulous operators will inform you your problem is solved, only for you to find the termites are back and causing more damage a few months later.

Larger Bait Source
Since EXTERRA In-ground Stations are the largest, they hold significantly more bait. As detailed by leading researchers at the International Congress on Urban Pests™, Highly Palatable Bait
EXTERRA’s Termite Bait with its unique feeding medium is considered to be the most palatable termite bait in the market. This means quicker and more reliable feeding, more bait consumed and better results. EXTERRA’s Termite Bait uses a unique, non-biased blend of pure alpha-cellulose with proprietary feeding attractants, just what the termites are seeking!

Most Potent Active Ingredient
The active ingredient in EXTERRA Termite Bait is up to 2,000 x more potent than similar activem™

EXTERRA’s Termite Bait Is The Most Effective
Independent trials show the benefits of EXTERRA’s Requiem Termite Bait™. EXTERRA has also been fully evaluated to confirm its efficacy against the widest range of termite species.

The EXTERRA Quality Tick
Only EXTERRA offers the guarantee that all EXTERRA Authorised Operators are professionals who have completed an in-depth training program in termite baiting and undertake on-going professional development as part of the EXTERRA Quality Care program.

Guaranteed to Solve Your Termite Problems
You need to be completely confident in your product to offer customers a guarantee that you will solve their termite problems. We are so confident in this effectiveness and the security it provides to you that we guarantee as a team, your Authorised EXTERRA Operator and2.

When you install the environmentally friendly EXTERRA Termite Interception and Baiting System, you will be supporting Australian Wildlife Conservancy and securing vital habitat for Australia’s threatened wildlife.
