ABUS HD-TVI Kit 8-CH 720p DVR + 4 OUTDOOR TUBE IR CAMERAS

---

## Description

Everything in one package This analogue HD package contains everything you need for analogue wired video surveillance in HD resolution. The 8-channel recorder including a 1TB hard disk drive can record approx. 2 weeks of 24-hour video data from the 4 supplied outdoor cameras. The system can be extended to max. 8 cameras if necessary. Connect and record The set is directly preconfigured for use: mount the cameras, connect and then select the desired recording mode (when motion is detected, according to a schedule or continuous recording). The image data can be viewed live and in real time using an additionally connected monitor. The set is operated intuitively using the supplied USB mouse. 24-hour surveillance Thanks to automatic day/night switching, the cameras are suitable for 24-hour surveillance in outdoor areas. The 24 LEDs have a range of 10m for increased security and are suitable for operation in unprotected outdoor areas due to their IP66 protection class. Full HD-ready The supplied recorder is Full HD-ready and can record video data in 1080p resolution at 12 frames per second. The set is therefore ideal for upgrading existing analogue systems to HD or Full HD. The set can also be extended by 4 additional cameras, e.g. with existing analogue cameras for use in the same system or extra analogue HD cameras. The effective IR range will depend on the installation location. If there are surfaces that absorb light or no objects that reflect IR light in the field of view, the IR range will be reduced and/or the video image will be too dark. Reflective objects in the immediate vicinity of the camera (e.g. roof gutter or wall) may also result in the reflection of IR light, which can disturb the image.
