

Quattro Grain Terminal (Berth 103)

LandTeam Surveyors have been providing an engineering survey service to Western Australia construction firm Kerman Contracting Pty Ltd with in the inner harbour precinct of Port Kembla Port.

The project is the construction of the Quattro Grain Terminal (Berth 103) and LandTeam has been involved with Kerman since the earliest design phases of the Quattro project.

The export terminal development is under construction with anticipated completion being November, 2015. The export terminal will comprise a road receival hopper, a rail receival facility, an elevated overland inloading conveyor system, eight flat bottom and nine small cone bottom silos for grain storage and associated structures.

Kerman is an excellent contractor to work with and we enjoy the surveying/builder relationship immensely.

LandTeam is also providing engineering surveys for Dynamic Civil at the site - Dynamic Civil are a Unanderra based contractor who are building the storage silos and underpinning the civil works for the conveyor system and the rail hopper.

Our surveyors are proud to be involved with both Kerman and Dynamic Civil on this project of national significance.
