

Curved Panel Glide System Silent Gliss 2730 Flex

## Silent Gliss Panel Glide Systems

# A Unique Dimension in Window Treatment

Silent Gliss offer the most sophisticated panel glide range. We have innovative systems for every need – choose between flat and folding panels, straight or curved tracks. Panel glide systems are perfect for today's extensive glazed areas.

## Quality and warranty

All the material used for our panel glides are rust free and UV resistant for perfect functionality and appearance over time. Extensive testing and a 5 year warranty is self evident in our high quality product range.

## Precision

Our experienced specialists assemble every system manually to guarantee a precise and smooth operation – day after day!

## Operating comfort

Our systems offer an extremely silent gliding of the panels and perfect operation for every need – from hand over cord to electric operated – everything is possible.

## Custom made

Panels are custom made in relation to proportional aesthetics, window dimensions and individual taste.

## Panel Glide Systems – Function and Design

The concept of sliding panels originated in Japanese cultural traditions. In the 1970's Silent Gliss was the first company to successfully adapt this idea for a new, high-quality window treatment solution. Still today, with the newest generation, Silent Gliss continue to offer a unique range of panel glide systems, providing a truly remarkable and creative opportunity for interiors.

### **Straight or bendable**

Our systems are either straight or bendable offering the perfect solution in every situation.

### **Smooth and silent**

Sophisticated in design, rollers and tracks allow a smoother, more comfortable and extremely silent gliding of the panels.

# Operation Possibilities

Our panel glide systems offer various operation possibilities for perfect comfort.

## Unconnected panels

Panels move freely and individually offering endless ways to adjust the light and design the look of your room.

## Connected panels

Connected panels are comfortably operated by a single draw rod.

## Cord operated

A single cord operates the panels and various stacking possibilities allow you to individualise your panel system.

## Motorised

The straight system Silent Gliss 2700 can be operated electrically by fixed wall switch or from the comfort of your chair with our remote control system.

## Design and Functionality

Our carriers for system 2700 are top quality. The aluminium carrier is durable and highly functional travelling smoothly and quietly along the track. Alternatively, a unique transparent carrier is perfect for applications where very delicate and fine fabrics are used.

The click-in option for Silent Gliss 2700 allows even greater installation flexibility. The carrier can simply be clicked in after the profile is mounted to the ceiling.

## A Curved Sensation

Our bendable panel glide system Silent Gliss 2730 Flex adjusts to every possible room layout and can be used as a design element or room divider due to its adjustable tracks and panels – individualising every room!

A unique flexible carrier not only allows the smooth and silent gliding of the panels but also enables the effortless sliding of panels around corners with narrow angles without stressing the fabrics.

### Around the corner

System Silent Gliss 2730 Flex allows panels to be stacked “around the corner”. Due to an innovative and ingenious track system, the profiles are bendable down to a narrow 15cm radius which allows the system to be used in rooms with 90 degree angles. Stacking the panels to the side offers undisturbed views.

# Installation Variety

## An innovation in room dividing

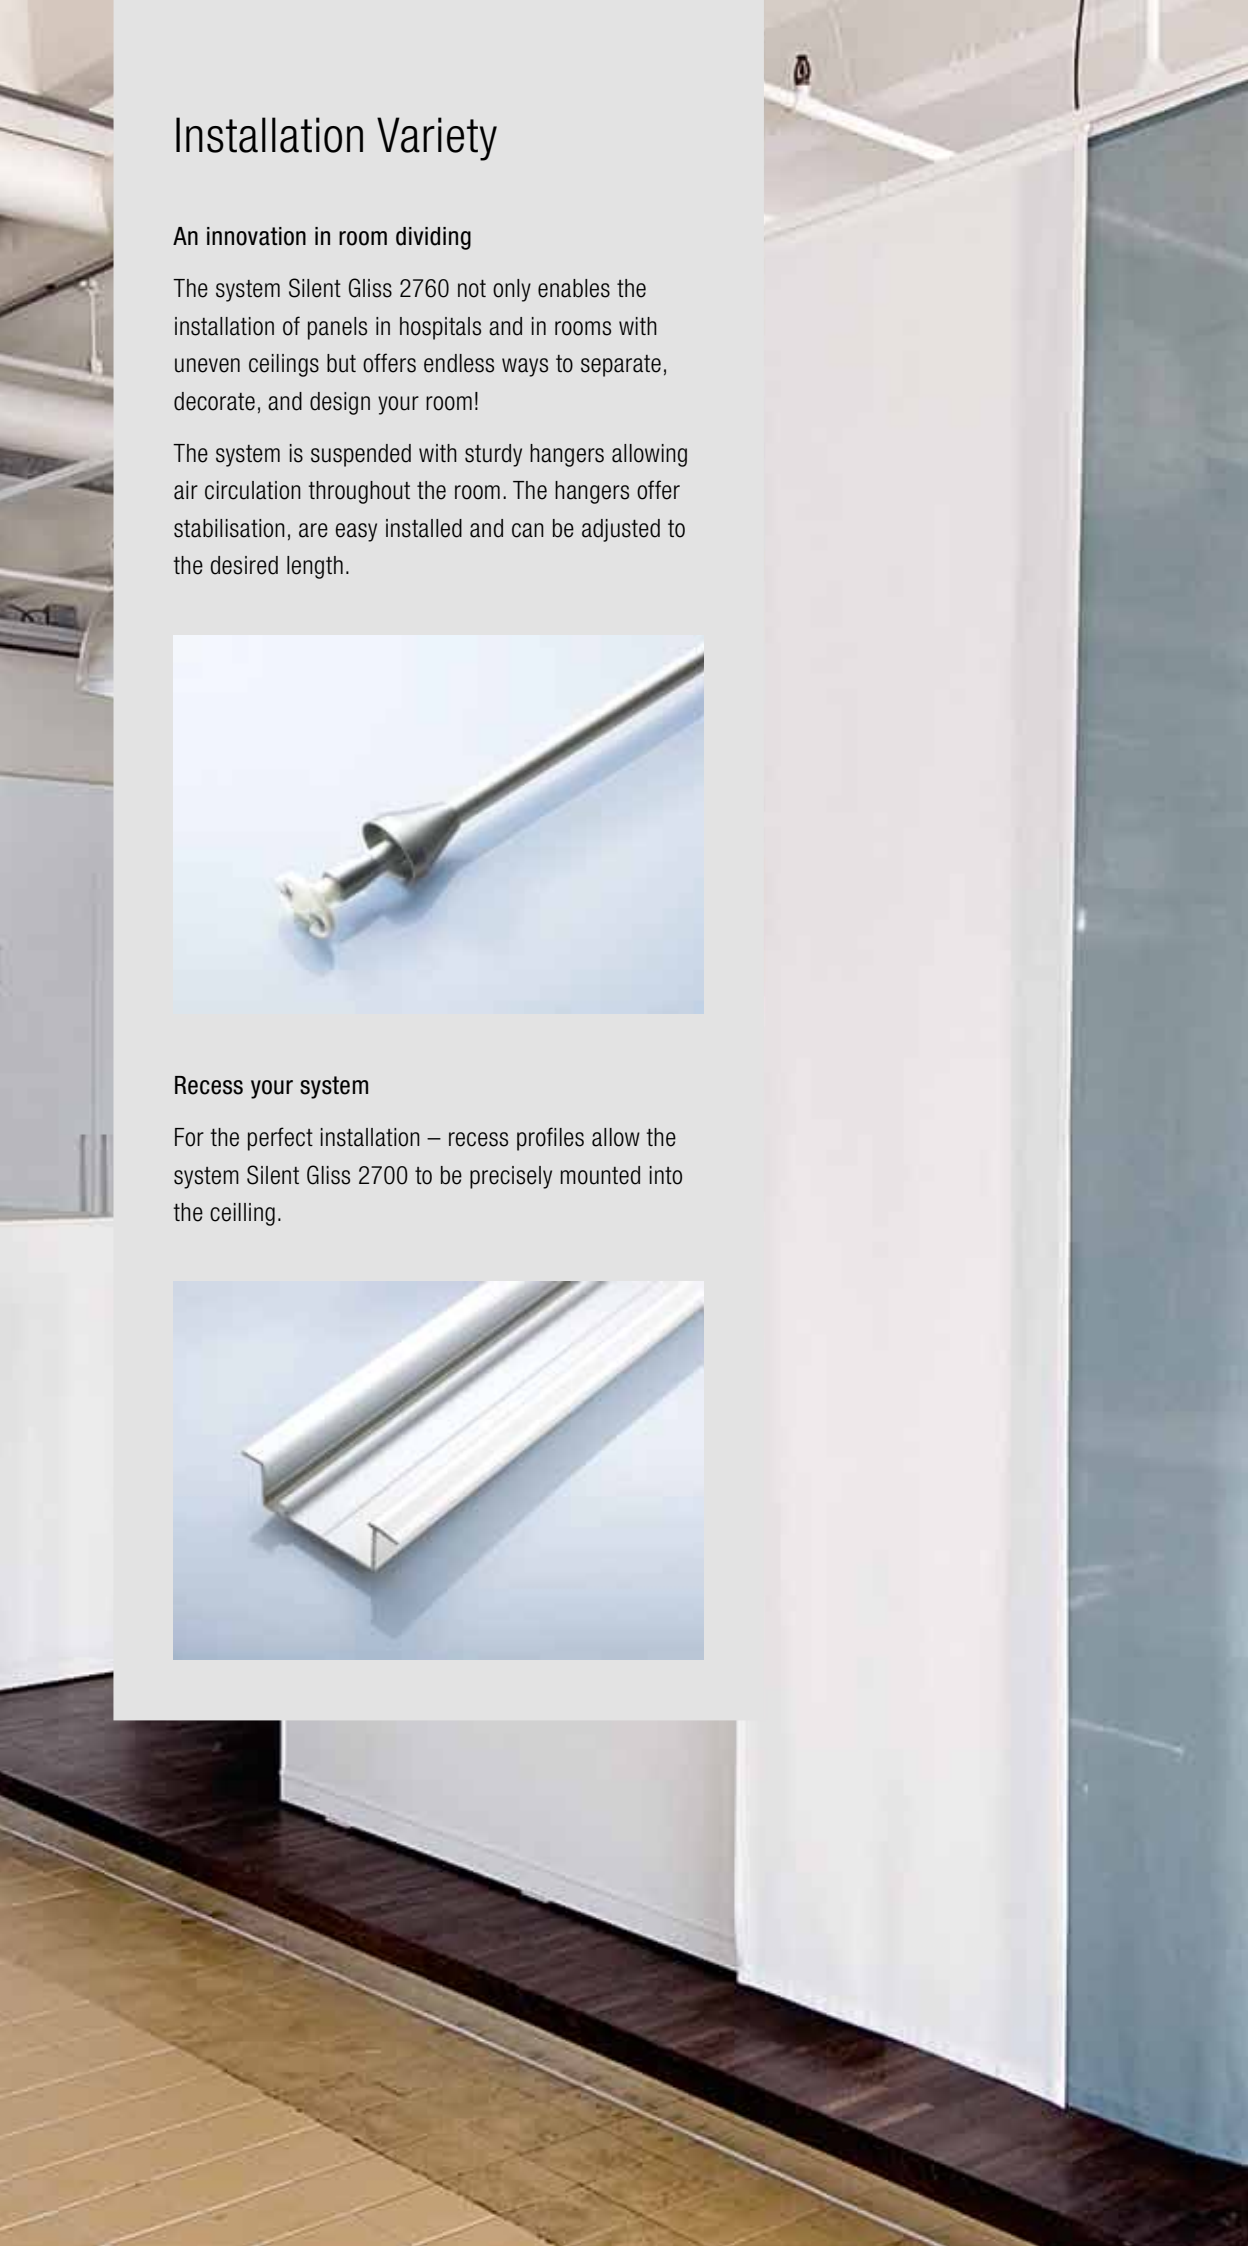

The system Silent Gliss 2760 not only enables the installation of panels in hospitals and in rooms with uneven ceilings but offers endless ways to separate, decorate, and design your room!

The system is suspended with sturdy hangers allowing air circulation throughout the room. The hangers offer stabilisation, are easy installed and can be adjusted to the desired length.

## Recess your system

For the perfect installation – recess profiles allow the system Silent Gliss 2700 to be precisely mounted into the ceiling.

## Design Your System

All our panel glide systems become true eye-catchers and offer an elegant and timeless look when combined with our new fascia and draw rod design elements.

A high quality, bendable design fascia offers the perfect finish and hides the internal workings of the panel glide system effectively.

The new designed draw rod enables the system to be operated with ease and comfort. A slight pull of the draw rod is enough to make the panels glide almost silently and the aluminium tube guarantees high stability.

Optional design cord weights in chrome, anthracite or white are available for cord operation.

## Folding Panel Systems – Discover Unique Elegance

The Folding Panel product range is a revolutionary window treatment solution from Silent Gliss. It's a highly innovative way to dress a window and define the look of a room.

Create natural elegance through the cool sophistication of sheer fabrics or sumptuous luxury with bright colour combinations. Or why not craft something completely original through unique fabric make-up?

Silent Gliss invite you to enter the inspiring world of Panel Fold, be creative and discover the opportunities of these unparalleled products.

The systems can either be operated by a single chain, crank or electric by switch or from the comfort of your chair with our remote control system.

**One window treatment – countless different looks**

Spring sunshine – make the most of it! The folding panels stack back into a small area to expose maximum window.

Stylish yet unobtrusive – the clean lines of the completely folded panel give a pared down elegance and allow a remarkable view outside.

Folding Panel at its best – refined sophistication for a room. The softer folds create stunning spatial effects and a distinctive atmosphere.

When closed, for maximum privacy, the panels retain a unique shadow fold, adding a 3-dimensional shape and depth to the window treatment.

## The Fabrics

When combined with fabrics from our exclusive collection, our systems offer the perfect interaction between functionality and design. The fabrics are mainly Oeko-Tex certified and all are flame retardant.

Our thoroughly tested fabric range consists of more than 40 fabrics in 500 variations, providing wonderful textures and colours. For a completely individual look we also offer digital printing, laser cut-outs and embroidery work.

Panels can be easily removed for washing due to their Velcro fastening (Silent Gliss 2700 and Folding Panel Systems) or can be slid into the flexible carrier using a profile which is sewn onto the fabric (Silent Gliss 2730 and 2760). The profile can then be washed together with the fabric.

Silent Gliss is the leading global supplier of motorised and manual curtain and blind systems in the high quality market. We offer our customers the very best in terms of quality, design, technology, service and individuality. Our core competence is innovation – inspired and driven by customer needs.
