INNOVATION_TECHNOLOGY_PERFORMANCE

ADIRA QHD press brakes, D series, are an innovative solution in relation to conventional press brakes. They combine their proven reliability, precision, repeatability and ease of use with the performances and versatility of press brakes with electronic balancing.

The result? Maximum productivity and accuracy!

With **CPS** and **AF Wizard**® systems you can adjust the bending depth under load and memorize the bending angle attained by means of the adjustment over the first work piece through the function "Teach". **MSync** and **SEMPR** systems ensure the accuracy and repeatability of the bending depth.

ERGONOMY_SAFETY_DESIGN

Adira innovates by presenting a new design concept based on ergonomic lines that

favour the operation and the operator's safety, with more user friendly and more intuitive centralised controls. New spaces have been created for the user like the tooling cabinet (optional) as well as other optional equipment. The shape combines a remarkable sturdiness with a clean and appealing working environment. The new colours – white and ocean blue – are a tribute to the Portuguese navigators in harmony with our 50 yearlong tradition of innovation and entrepreneurial spirit.

PRECISION_RELIABILITY_QUALITY

This new bending concept enables the optimisation of the performance, ease of operation and operator's comfort, thus reaching productivity gains and as a consequence a faster return on the investment.

The new QHD press brakes, D series, are so easy to operate that the operator very quickly will be able to explore all possibilities offered by these machines.
