HAVE A PLUMBING JOB OR PROBLEM?

[CALL US!](#)

## NO HOT WATER ??

Don't panic, call us first. We are experienced in all hot water repairs and replacement and always aim to restore hot water the same day, electric or gas. If the unit can be repaired we will do so, if the unit is burst we can supply and install all major brands including Rheem, Vulcan, Aquamax, Dux, Rinnai and Bosch.

It is important to match the correct unit to the application, energy wise, budget wise and efficiency wise.

*Feel free to call and discuss anytime with a licensed plumber in our office at all times.*

For advice, service, repair or replacement of all types of hot water problems, call Taylor and Sons for fast same day service in Melbourne's East and South East suburbs, 9876 8686

## WHAT IS A CONTINUOUS FLOW HOT WATER SYSTEM?

A "continuous flow" or "instantaneous" hot water system heats water as it is used and does not store water so can never "run out". These are suitable where there is a large or constant demand for hot water or where there are space limitations.

## WHAT IS MAINS PRESSURE?

A Mains Pressure hot water service is probably the most common type of unit available, be it gas or electric. It stores hot water in a tank and uses the pressure from the water main to push the hot water to the taps at the same pressure as the cold water.

## GRAVITY FEED SYSTEMS

A Gravity Feed hot water service is usually located in the ceiling space and heated by electricity. They are mostly found in older properties and can often give good service for 40 plus years. The downside to a gravity feed unit is that it relies on gravity to deliver the hot water which is often at a much lower pressure to the cold water.
