Water tankers product overview

Water is a precious commodity...and all businesses need to ensure they're getting the most out of it.

AJ Stock can help. We are leaders in specialised design water tanker systems, offering composite reinforced (fibreglass) tank systems. Our water tankers can be fixed-chassis, hydraulic interchange, tray-mounted or our unique skid-mounted/ slip-in water tanker system, which allows you to use an existing tipper truck body as a water tanker!

Our fibreglass tanks offer a range of benefits that make them a better water cartage solution than either poly or steel tanks:

- Being fibreglass they're long-lasting, with a strength and durability that will handle anything you ask it to do, and non-corrosive so they handle salt, bore water and most chemicals
- They're lighter weight than steel tanks, hence greater payload and less trips required to get the job done
- Longer warranty period than most non-fibreglass tanks
- They incorporate a fully-integrated longitudinal and transverse baffle system which gives drivers peace of mind operating in busy traffic conditions
- They're flexible—meaning we can build you a slip-in water tanker to fit your existing tipper

15,000 litre fixed chassis

9,000 litre fixed chassis

10,500 litre slip-in tanker

Tray mounted with tree watering boom

We specifically design water tankers for a range of applications including road-making, water cartage, tree watering and fire-fighting. And if you already own a tipper truck and need a water tanker, why purchase another complete truck?
