## Rail Wagon Unloaders

Vac 200/4T

**VSS** rail wagon unloaders are the answer to moving difficult product from wagons.

### High Power / Low Noise

Powerful NTS 50/10 pneumatic vibrator, with over 8000 newtons of force to move the most stubborn material. Non-impacting vibrator design has no metal-to-metal contact reducing stress on the wagon.

### Easy Installation

4 vacuum cups provide powerful suction from inbuilt vacuum generators to hold the vibrator tightly to the wagon.

Model Vac40 has twin generators.....Model Vac 200/4 has an independent generator for each suction cup.

Vac 40M

### Improved Operator Safety

Unit can be suspended by inertia reel from an overhead gantry: no need for the operator to lift the unit.

The beam type 200/4T allows the operator to simply press one button which starts the vacuum generators and automatically starts the vibrator after a pre-set delay.

**The operator does not need to hold any part of the unit while the vibrator is operating**
