energy-saving retrofit systems

What is Energlaze?

Energlaze is a revolutionary retrofit glazing system which is installed to the internal face of existing windows.

Without the need to replace the existing glass or frame, energlaze enables the window performance to be significantly improved.

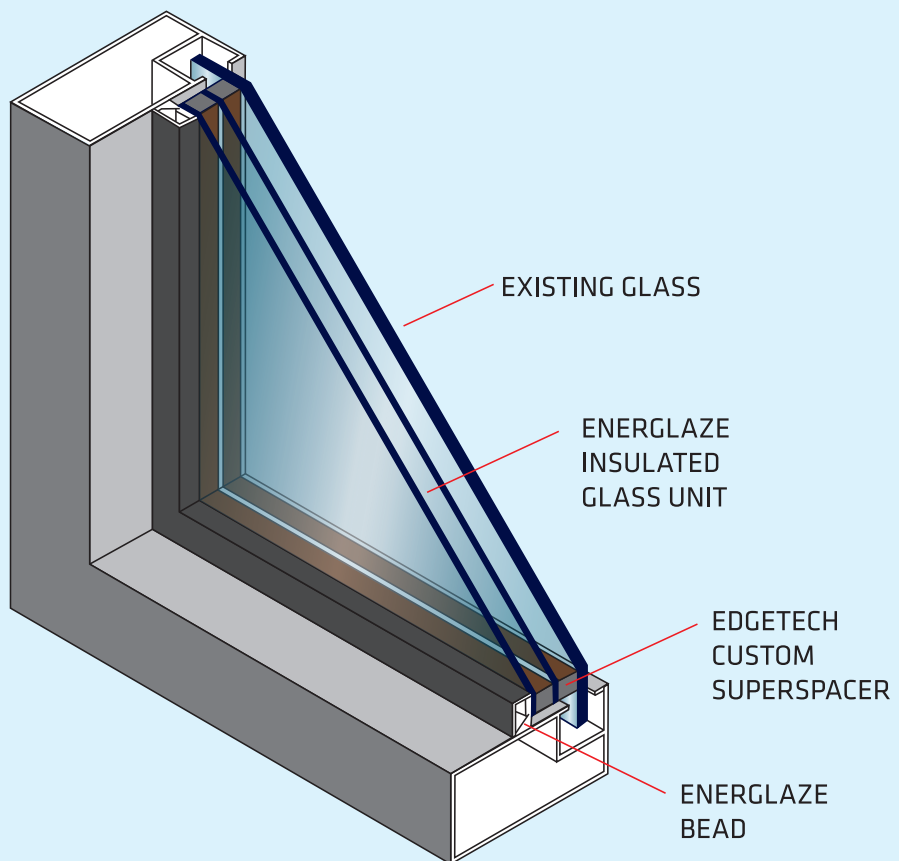

Using edgetech custom super spacer and a specifically designed glazing system a double glazed unit is fitted to the existing glass to create a triple glazed unit.

The installation is completed from the inside of the building and does not require any modification to the existing glass or frame.

The installation process is very fast and creates minimal disruption to the occupants in the building.

The unit has been designed to US standards (ASTM 2190; EN 1279) and meets ASTM E33 120

The energlaze system is suitable for most commercial applications including offices, schools, shopping centers and hospitals.

energy-saving retrofit systems

Energglaze energy efficient retrofit systems designed for any curtain wall commercial retrofit application.

Who benefits from energglaze energy efficient retrofit systems?

The Environment

HOW?

The window is an integral part of the building envelope. A more energy efficient window contributes significantly to reduced energy usage and ultimately reduced carbon emissions.

The Building Owner

HOW?

In conjunction with other energy saving measures, a building with more energy efficient windows will achieve a higher environmental efficiency green star NABERS rating. A higher green star rating means a more marketable building. The result? More quality new tenants and commitment from valued old tenants.

The Tenant

HOW?

A comfortable energy efficient working environment is proven to be conducive to happy and productive staff. Improved inside glass surface temperatures make it more comfortable to work and sit near windows. Staff will be warmer in winter, cooler in summer. External environmental noise will also be significantly reduced.

The Contractor

HOW?

Energglaze energy efficient retrofit systems are quick and easy to install and at a fraction of the price of total window replacement. All work is conducted internally during normal working hours with no need for external scaffold and more importantly with minimal disruption to office staff.
