## Water Wise Tips

### Simple ways to save water

- Turn the tap off while brushing your teeth
- When shaving fill the basin instead of letting the water run
- A quick shower uses less hot water than a full bath tub
- Consider installing low flow, water efficient showerheads and taps in your home
- Have a full load of washing before starting the washing machine
- Instead of rinsing your vegetables under a running tap, half fill your sink with water
- Turn off taps tightly but gently so they do not drip
- Wash your car on the grass and water your garden at the same time
- Never clean the driveway or footpath with a hose - use a rake or broom
- Water in the cool of the morning or late evening
- Water your garden less often but more thoroughly
- Choose water-wise plants
