

Arboguard: Soil Injection Treatment

Arboguard soil injection treatment is a service offered by The Tree Doctor to increase plants vigour and health. All applications are performed by staff who are fully trained and licensed operators. The technology behind the application system has been extensively trialled and proven internationally.

Correct application by very high-pressure soil injection of 'Arboguard' is a highly effective treatment as it is systemically distributed throughout the plant. The effects are long term and will control most sap sucking, boring and chewing insects that frequently attack living plants in gardens throughout South-East Queensland.

'Arboguard' has a very low toxicity and is safe to use around the family and their pets.

When applied correctly, 'Arboguard' provides protection for up to 12 months effectively controlling:

- Beetles
- Aphids
- Thrips
- Borers (*most species*)
- Scale
- Psyllids
- Weevils
- Sooty mold will be controlled when scale and aphids are controlled

The product includes fertilisers and microbial soil activators to enhance and develop health and vigour in stressed shrubs and trees.

The time taken to control insect attack varies and is dependent on the species of plant, soil moisture levels and the severity of insect attack – usually 10-16 weeks. Plants which are severely affected and in stressed conditions may take a little longer.

Short term efficiency may be achieved with a combination application of foliage and soil treatments.

Call The Tree Doctor and one of our team will answer your questions and provide the help you need.
