About us

With a long history in rural services both in the north - east of the state of Victoria and the Wimmera area broad acre spraying and working locally in the industry for two decades Bruce and his specifically tailored machinery brings a positive informative approach to the business of weed control . The hands on approach where the client is informed of every step in the process and given up to date methods of dealing with the specific problem at hand ,as well as a guarantee to the desired result and completion time of the project.

Whilst the majority of our clientele are mainly concerned with the eradication of Blackberry ,St Johns Wort ,Pattersons Curse ect we can offer advice and solutions tailored to your needs and specific problem. Our resources extend to goodwill within other companies which allow us to extend the parameter of equipment that can be accessed if we do not have the solution on hand for your task.

We use and recommend Kwik spray equipment and ours are housed on the back of Landcruiser tray 4x4 and Toyota Hilux vehicles. The radius that can be sprayed from the vehicle is 200 metres and with two guns gives us a 400 metre diameter. We use 800 litre oval tanks for their lower centre of gravity and these are baffled to reduce water movement and air bag suspension is used under the rear for additional stability on steep and uneven terrain. The motor on the spray gear is 9 hp Honda , as we find them extremely reliable and help deliver 54 litres/minute to each spray gun, and reels are equipped with independent radio controlled retraction [further details on vehicle equipment see separate data sheet]. Trucks are equipped with Venturi quick fill Systems and additional water drawing equipment if required.and complies with all current OH&S regulations .

Our operators are all fully trained in all facets of weed control and equipment on the trucks and all carry certification on their persons to establish their bonafidis . All have been in this industry for a minimum of 5 years. All equipment and work is fully insured and covered by industry standard public liability cover and we have an approved DPI contractor number..

Our specialist team have supplied weed control in a large range of environmentally sensitive areas of National parks, high traffic areas of local councils including nature strips, sports grounds , school ovals, parks and gardens , roundabouts and many private farming properties and farm operations, waterways. Steep country and the jobs that others avoid are a specialty. Whether its blackberries in your paddocks or unwanted weeds in your reserve, roads or river, consult us for a solution

We guarantee our results and offer all a no obligation quotation and consultation
