

Martin Pneumatic Piston Vibrators Series P

- Linear vibration
- Nominal frequency 1350 min^{-1} to 5650 min^{-1}
- Force output 323 N to 4758 N
- Cast iron body
- Frequency and force adjustable by air pressure

Models P-1.25S, P-1.25Q

Models P3S, P-3Q

Applications

P series are ideal for moving damp and sticky material from hoppers and down chutes. They are also used for knocking concrete products from moulds.

Design

A precision steel piston is moved by air pressure back and forth in a cast iron cylinder. The standard 'S' model impacts into a integral base plate; the 'Q' model has an air cushion to eliminate metal-to-metal contact and give quieter operation.

Operating Conditions**Drive medium:**

Compressed air with filter and with lubrication

Operating pressure:

200 kPa to 600 kPa

Ambient Temperature:

-20 to 120° C

VSS offers the accessories required for the mounting, installation and control of vibrators and interval impactors.

VSS provides solutions. Consult our experienced application technicians.
