Whether there's something wrong with one of the valves, the sacrificial anode or another parts of your hot water systems, we'll be able to sort you out quick smart.

## What kinds of Hot Water System can you work with?

(<http://www.femalechoiceplumbing.com.au/hot-water-brands/>)

There are many different kinds of hot water system available these days, including different fuel sources and different delivery methods, which makes it a little confusing when you're purchasing a new one or have a problem with your existing one. However, the hot water systems experts here at *Female Choice Plumbing* have the skills, experience, tools and parts to work with all types of hot water heaters, so they can make even the most complicated situation that much more simple. There are typically six types of hot water system you need to know about, which your attending water heater expert will be able to repair or replace for you quickly and easily.

These six types of hot water system are:

## Electric Hot Water System

(<http://www.femalechoiceplumbing.com.au/electric-hot-water-heater/>)

The *electric water heater* uses an electric element to heat your water. Electric systems are more uncommon these days, since they're fast becoming obsolete as gas, solar and heat pump types continue to get more effective and economical. However, the electric hot water system can still be very valuable, since it is cheaper to simply install an electric hot water system than it is to have gas connected or solar installed. It is also possible to change your tariff, depending on when you use your hot water most, so money can be saved that way.

If you live in South Australia, though, you won't be able to have a new electric storage hot water system installed, since updated regulations prohibit this for most properties. They're considered to be too ineffective and uneconomical,

so if you have one of these appliances which can't be repaired, your attending *Female Choice Plumbing hot water systems professional* will need to replace it with a different type.

## Gas Hot Water System (<http://www.femalechoiceplumbing.com.au/gas-hot-water-heater/>)

One of the more economical hot water systems around, *gas water heater* also requires little setup if you already have a gas connection, which therefore means little cost to have it installed. This type of system uses a gas powered element, sometimes with an electric ignition, to heat your water. Available in both *storage* and *continuous systems*, gas can be very cheap to run and emit less greenhouse gases than an electric hot water system, depending on the ratings of the unit you buy. For all repairs and replacements of gas hot water systems, the experts at Female Choice Plumbing can do anything you need, regardless of what brand or model you've got.

## Solar Hot Water System (<http://www.femalechoiceplumbing.com.au/solar-hot-water-heater/>)

"2 Panel System Shown"

Renewable energies are always the most environmentally friendly energy sources, and the *solar hot water system* is no different. By collecting the sun's rays and converting them into heat energy, your water is heated before being stored in a tank. Solar reduces your running costs significantly, making it far cheaper to heat your home or business's water supply. If you need somebody to replace or repair your solar hot water system, contact us here at *Female Choice Plumbing*. Our hot water heater experts have everything they need for any and all work you need done to your solar

unit.

## Heat Pump Hot Water System (<http://www.femalechoiceplumbing.com.au/heat-pump-hot-water-heater/>)

The newest, most innovative of the four types of hot water system, the *heat pump water heater* works like a refrigerator, pumping refrigerant through the system to collect heat. Whereas a fridge removes the heat, though, the heat pump hot water system adds the heat to create hot water. These appliances run on electricity, but use very little to get the job done, making them very economical. If you need heat pump hot water system replaced or repaired, just contact us here at *Female Choice Plumbing*. All our extensively trained, licensed hot water heater professionals have the skills, knowledge, experience, tools and parts for any job you need done.

## Storage Hot Water System (<http://www.femalechoiceplumbing.com.au/mains-pressure-storage-hot-water-heater/>)

The storage model of water heater uses a tank to store water that it's already heated. The tank sizes range anywhere from 25 litres to 400 litres, depending on your water usage. Hot water is taken from the top of the tank, then cold water is pumped into the bottom to replace it. This decrease in overall temperature switches the heater on, which switches off when the preset temperature is reached. *Storage hot water systems* provide you with fast hot water at mains pressure, but can run out of you use too much and can be very expensive if you use too little. All fuel sources are available in storage delivery units. Our *Female Choice Plumbing water heater experts* can replace and repair all makes and models of storage appliances.

## Continuous Flow Hot Water System

(<http://www.femalechoiceplumbing.com.au/continuous-flow-gas-hot-water-heater/>)

Instead of using a tank to store already heated water, the continuous flow (or *instantaneous*) hot water system only heats water as it's being used. When the hot tap is turned on, the heater turns switches on to heat the water as it passes through the system, switching off when the hot tap is turned off. Although *continuous flow hot water systems* can take a while to heat up, and deliver water at decreased pressure, they'll never run out of water heater and can be cheaper to run since you aren't heating water you're not using. Continuous flow water heaters are only available in electric and gas. No matter which one you've got or what you need done with it, our *Female Choice Plumbing water heater experts* have you covered.

## What Brands of Hot Water Systems do you work with?

(<http://www.femalechoiceplumbing.com.au/hot-water-brands/>)

Here at *Female Choice Plumbing*, we understand that not everybody has the same brand of hot water system, just like not everybody has the same fuel source or delivery method. That's why we've gone out of our way to make sure that every single one of our fully qualified, licensed has the tools, knowhow, skills, experience and spare parts to work with all of the *most popular brands of water heaters*. No matter what you've got, no matter what problem you've found, we'll be able to send you a hot water heater specialist will have the right solution for you.
