Hot Water Systems ▼

Hot Water Systems

With Prime Plumbing you can be assured of a job well done, by professionals that care about your home and business as much as you do.

Whether it's a gas, solar or electric system, our plumbers have the experience and skill to provide you with the highest quality of workmanship and professionalism. With a full maintenance and installation service, Prime Plumbing are the **Hot Water Systems and Plumbing Specialists in Emerald**, so the best choice for all your hot water needs.

Gas Hot Water

Gas hot water systems come in two different types. They are either storage units or continuous flow units. Storage units store and keep the unit full of hot water. The continuous flow units heat the water as it is used, and do not store any water preheated and ready for use. There are many different types of storage and continuous flow gas hot water systems available and each serve a different function according to what is needed for that particular dwelling. We can help you work out what sort of gas hot water system you need for your home or business.

Solar Hot Water

We provide Installation and repairs of all Solar Hot Water brands Prime Plumbing is the Regions supplier of the ecosmart solar range. When you add up the benefits, installing an EcoSmart Hot Water system really is the smart choice for savings and energy efficiency.

- ✓ Superior efficiency
- ✓ High STC values
- ✓ Rebates taken care of
- ✓ Environmentally friendly
- ✓ Australian owned
- ✓ The best advice
- ✓ Superior installation
- ✓ Built tough for Aussie conditions
- ✓ Guaranteed hot water in 24hrs

Electric Hot Water

If you are looking for an electric hot water system Prime Plumbing can help you choose to suit any purpose. Cost and warranty of units is an important aspect of choosing a unit, and we will work with you to ascertain which brand, size and warranty best fits your home or place of business. When making a decision about what system would work for you, it is important to note that the Federal Government has a program in place to phase out electric hot water systems. We can advise you on the legal requirements regarding electric hot water systems.

Heat Pumps

A heat pump is a another great way of using renewable energy to heat up the water. Heat pumps use approximately only 1/3 of the energy of a traditional electric water heater.

Benefits of a heat pump:

- ✓ Massive savings in hot water related expenses over the long term
- ✓ Environmentally friendly hot water option
- ✓ In extreme cold, an electric assist is activated to ensure the water stays at the desired temperature
- ✓ No roof space or panels needed
