

## Resistograph Testing

The Tree Doctor continues to provide Total Tree Care Solutions with our unique Resistograph testing service. Our company is one of only a few tree care providers in Queensland with an accredited arborist on staff, able to perform resistograph tests and interpret the results correctly.

**The benefits of Resistograph testing include:**

- Early detection and extent of internal decay present in tree trunks.
- Establishing the structural integrity of a tree and therefore its potential hazard risk.
- Detection of internal cracks and other structural faults within the tree.

This service is provided by our Principal Consultant and is offered in conjunction with a report and upon request, analytical graphs.

Resistograph analysis allows for a justifiable recommendation to be made on the viability and longevity of a tree.
