

SAVE TIME AND IMPROVE ACCURACY

BY AUTOMATING THE PROCESSING OF YOUR INVOICES

With Inland Technology's Invoice Processing Solution, you can improve cashflow, improve financial compliance, reduce processing time, improve accuracy and reduce data entry time.

Inland Technology's invoice processing solution automates the processes of scanning and capturing, interpreting, filing and approving invoice data. No matter how invoices enter your organisation – on paper or in any electronic form – the software intelligently extracts the important information, stores the data, validates it according to a pre-defined set of rules, imports the data into your accounting software and can also automate and manage the invoice approval process.

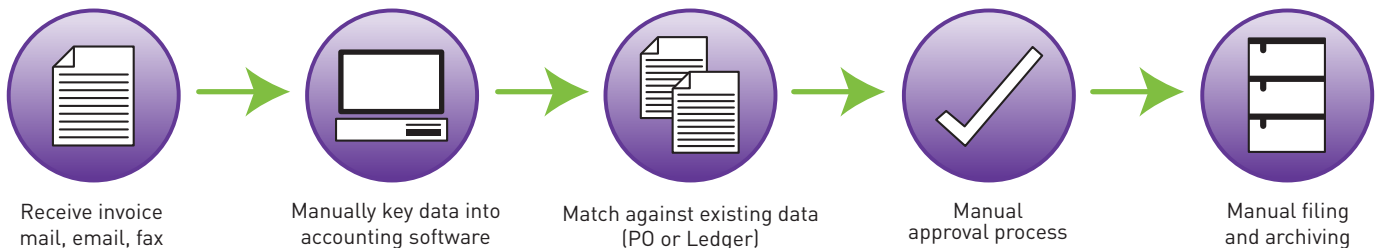

It's an easy-to-use, out-of-the-box invoice processing solution that's fully adaptable to your individual business requirements.

By using an Invoice Automation Solution you can put an end to manual data entry, the month end rush, lost invoices and late fees. Not only will you be processing your invoices faster, other benefits include visibility of individual invoice status to forecast and manage cashflow and to set KPIs around process performance. The Solution also lets you know who, where, when and how each invoice is dealt with, making financial compliance easy.

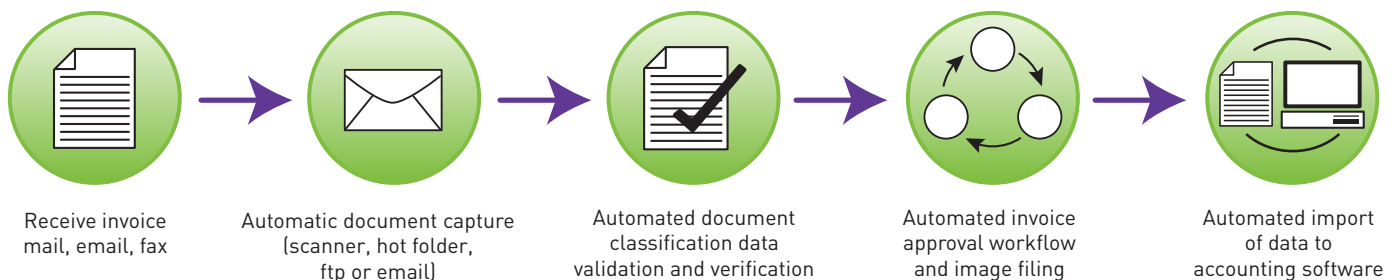

Automated invoice processing reduces the cost of processing each invoice from \$3.90 – \$1.14

Hackett Group Research 2011

YOUR CURRENT MANUAL INVOICE PROCESS

WHAT YOUR NEW AUTOMATED PROCESS CAN LOOK LIKE
