Adelaide Convention Centre

Membrane Structures allow a design freedom not normally possible with other building materials, shape which cannot be achieved any other way, become reality.

Castle Plaza Shopping Centre

The Fabric Membranes can span large distances without supporting structure used in conventional building. Galvanised and powdercoated steelwork, stainless steel corner plates and wire cables, combined with the membrane, create virtually maintenance free covered areas which protect against harmful U.V. rays and the elements.

Stansbury Foreshore

We use the most up to date computer structural and finite element analysis programs to generate our membrane shapes, analyse the loadings and generate computer cut panels for ultimate accuracy.

Kildare College

Complete Design and Full Engineering Certification, complete with Structural Drawings can be supplied in a total package.

Lido's Restaurant - Holdfast Shores

Customs Building - Osborne

Bordertown Memorial Hospital

Ideal for Alfresco dining for café's, restaurants  
workplace eating and smokers areas.

Burnside Civic Centre

The translucent fabric allows natural light to  
enter, enhancing the alfresco atmosphere  
and keeping the area cool in the extreme  
weather.

Playground "Deluxe" Cone Structures

Our 10m x 3m state of the art flat bed computer cutting table enables us to produce the smallest to the largest project with ultimate accuracy.

Sail Panels are then High Frequency Welded together to form one continuous membrane.

The sophisticated 3D Computer Design Software enables even the most complex shape fabric structures to become reality.

Shadeform can offer a design consultancy service to any stage of a project.

Our qualified staff, with their years of experience in the Sailing and Shade industries, can assist you with any enquiry.

Contact Shadeform today to discuss your next Project.
