## **A Polythene or Steel Watertank for every application**

Managing Director of Roy Walker Plumbing, Roy Walker, is a Licensed Plumber and Drainer in his own right. He has designed, manufactured and installed watertanks from Cardwell to Cooktown to Normanton for more than 50 years

### **Galvanised Aquaplate watertanks**

- Manufactured in our workshop on Tolga Road Atherton and transported all over North Queensland have the flexibility of being built to order, so if you have a tight spot or a large spot we can manufacture a watertank to suit.
- Aquaplate steel has been specifically developed for the fabrication of watertanks with a bonded tough food grade polymer skin on the inside of the tank and also on the outside of the bottom flat sheet ensuring a corrosion resistant, food grade, water storage with 20 year guarantee.
- The protective barrier is provided from the inside, so no matter how saline or corrosive the local water may be, long life for your water tank is assured
- Aquaplate steel watertanks are light and portable, providing ease of transportation and installation, both services being offered by Roy Walker Plumbing.

### **POLYTHENE WATERTANKS**

- Roy Walker Plumbing added to their water tank range the highly durable Polythene water tank in 1994,
- Polythene watertanks are easily transported, tough and built to exceed Australian standards.
- There is a full range of transportable sizes from 1000 litres to 47300 litres . These tanks have self supporting roofs with no need for centre pole.
- Large tanks feature a UV cover under the leaf strainer to block sunlight that causes algae growth

- Our Polythene water tanks comply with Australian standard AS2070 (food grade) and AS4020(drinking water) for confident safe drinking water storage.
- Roy Walker Plumbing's polythene water tanks are manufactured by the largest water tank manufacturer on the East coast of Australia.
- Being one of only a handful of manufacturers in Australia who have achieved the coveted AS 4766 compliance which governs the design and manufacture of "Polyethylene water storage tanks".
- The total manufacturing enterprise from administration to every facet of manufacture are subjected to six monthly audits to meet our Third Party Accreditation
- All our polythene water tanks are covered by a 10 year Fix or Replace Warranty which commences from the date of purchase.
- Our polythene tank designs undergo Finite Element Analysis (FEA) to ensure optimum long term performance, and the finished product is tested using inhouse facilities that include ultrasonic thickness measurements and impact testing.
- And, of course, all our tanks meet Australian standards governing manufacturing materials, durability and storage capability.
