## Accelerating & Braking

Like 5

There are hundreds of variations on the theme of accelerating and braking, allowing people with many types of disability to control their vehicle with ease, safety and style.

### Accelerator Ring

The Accelerator Ring is an advanced control driving adaptation. It offers a natural driving position providing effortless, controlled acceleration and braking. For many drivers, it provides one of the most satisfying driving experiences available.

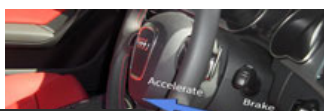

### Electronic Radial Hand Controls

A bliss for every-day driving, the Electronic Radial Hand Controls provide absolute minimal effort acceleration with smooth, positive operation.

### PME Hand Controls

PME Hand Controls use mechanical linkages to allow for left or right handed control of the brake and accelerator. Our design

Call us now: (02) 9482 2808

### Customised hand controls

PME can also configure custom hand controls for those with particularly unique conditions that are unable to operate the traditional format controls.

### Left-Foot Accelerator

The Left-Foot Accelerator is a simple yet effective modification that allows people with restricted use of their right leg to operate the accelerator and brake with the left leg. This modification involves the installation of a second accelerator pedal in the vehicle to the left side of the brake pedal.
