

WHATS HAPPENING AT DIACORE

It has been a bit of slow start to 2015. Having the election in March certainly slows things for the building industry. However signs are looking good for the remainder of the year with lots of planned infrastructure.

RECENTLY COMPLETED JOBS

We recently completed a job, splitting a retaining wall in Woollahra.

Retaining Wall Specialists (RWS) asked [Diacore](#) to cut a retaining wall into manageable blocks so they could crane them onto a truck for removal.

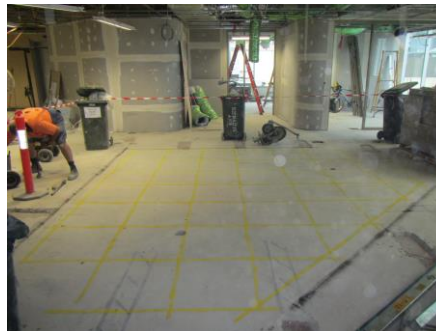

(Continued below)

THE CIRCULAR WIRE SAW

The Circular Wire Saw is a new service to Diacore, which makes us capable of cutting circles from 1 metre to 6metres in diameter and in concrete up to 1100 mm thick.

This specialized equipment allows concrete or masonry to be cut and removed in the most practical way. Wire sawing has been adapted to become a fast, safe, and cost effective alternative to conventional destruction methods.

If the use of our circular wire saw seems like something you are interested in, or you have a job you think could be done with this machine, please don't hesitate to contact us for a free on site quote.

(Continued)

We looked at wire sawing it into blocks but because it was adjacent to a footpath thought it would be safer to use the Darda splitters.

Diacore used 2 of C12 Darda splitters to crack the block and use expansion wedges to snap the steel the block was then lifted onto the truck for disposal.

This job was completed within 1 day a lot quicker than the 2 days allotted if having wire sawn it, less mess, less hazards.
