Drain Camera Adelaide

24 hours, 7 days a week.

Special Offers

[Click here For Metropolitan Plumbing Special Offers](#)

We currently have a special where there is no drain camera machine hire, a saving of over \$275 on blocked drains that we attend to clear.

When we attend blocked drains, we strongly recommend that a drain camera is placed down the drain to see if the drain is broken or damaged, this is very important as a leaking drain can result in a house dropping, due to the water leaking from the pipe wetting the soil around the foundations.

Metropolitan Plumbing have a number of drain cameras, which will show a video of the condition of your sewer or storm water drains, as this pipe work is often under the surface, a drain camera is a useful tool to show why a customer is having drainage problems.

We offer a 24 hour 7 days service where we can have one of our cameras placed down your drains to see why a drainage pipe is not flowing correctly.

The most common problems we find are:

- The drain has broken
- Roots have grown into the drain as it is a water source for trees
- Misaligned Drains
- Collapsed Drains
- Drains with back fall and pipe work that has dropped
- Crushed pipe work
- Foreign objects in the drain

If the camera shows one of the above problems we will be able to give you a price to repair or replace the damage area of drain.

When you are looking for a plumber with a drain camera in Adelaide please ring Metropolitan Plumbing on **1300 367 333**.

Our video inspection equipment can provide a visual image of the condition of underground pipe work (diameter 50-300mm). In simplistic terms it is a video camera that can be 'fed' into existing pipe work, allowing the plumber to inspect and identify areas of interest or concern.

This is used as an efficient, cost effective way of identifying and/or locating any problems with pipes that cannot be readily exposed or assessed.

A Customer can then be provided with a visual image of the pipe work either through photograph or DVD.
