Burst Pipe Adelaide

24 hours, 7 days a week.

Do You Have A Leaking Pipe in Adelaide?

Metropolitan Plumbing are Adelaide's burst pipe professionals, who are able to fix leaking pipes 24 hours 7 days a week. Our vans are fitted with most replacement parts to fix leaking water pipes, sewer pipes and leaking gas pipework. We offer a within the hour service*, so we can often have a plumber or gasfitter out to you within 60 minutes in emergency situations.

Leaking Copper Pipe

Copper is a common material we are repairing as it still corrodes despite what most people think. When repairing copper tube we will either weld using oxy acetylene or use mechanical brass fittings to join in a new piece of pipe. Listed below are areas where we have found burst or leaking pipes to occur throughout Adelaide's suburbs.

- Certain soils may have corrosive capabilities that over years eat away at the copper piping.
- When copper touches dissimilar metals such as galvanised steel then copper will also corrode.
- Another time we repair copper pipe is in frost regions where the copper splits and then begins to leak.
- In the wall on the breeching piece (the concealed fitting that holds the taps in the wall), where hot and cold water mix, the expansion and contraction also causes the copper pipe to burst.
- Existing welds may have not been welded correctly or a flux used that creates a leak, this can even take years before the weld fails.
- Copper that has been struck or damaged

Leaking Galvanised Pipe

Galvanised pipe is rarely used as a means of pipework for water these days due to its high corrosive qualities. However it is still used in new homes for gas pipework, due to its rigid qualities and cheapness to purchase, compared to copper. We are daily repairing and replacing galvanised water and gas pipes due to them either leaking or being burst.

When galvanised pipes have been used for water they corrode internally and eventually block the water from going to the tap and resulting in no pressure. We can either replace the blocked or leaking section or the whole water service complete with copper.

- Plumber Semaphore
- Plumber Unley

We accept these credit cards on site.

& operated**

Leaking Poly Pipe

This pipe is black in colour and is often found in gardens and external to the house. We are finding this type of pipe throughout Adelaide and there are many varieties, with different wall thicknesses. How poly is joined and connected is by pushing the pipe into the fitting, and then a backing nut is tightened to create a seal between the pipe and joiner. Poly pipe leaks for the following reasons"

- For fittings that may have been originally installed under pressure, there may be too much strain on the fitting.
- Ground movement, pulling the pipe out of the joiners.
- People damaging the pipe while gardening.
- Where the poly connects onto another material.

Pex pipes leaking

- These pipes have a softer more flexible composition than that of copper. Many people refer to them as plastic water pipes. We often repair them due to the following reasons:
- Rats or mice have chewed the pipe.
- The pipe has rubbed onto the brickwork or other rough material and a hole has been created.
- Joins have failed often due to incorrect installation from the original plumbers.

Pex pipe include the following brand or manufacturers which we find throughout Adelaide homes:

- Sharkbite pipe
- Auspex Pipe
- Profit Pipe
- Rehau Pipe

We at Metropolitan Plumbing are Adelaide's burst pipe specialist who can repair or replace most leaking pipes 24/7.

Full quote and advice available on the spot after any repair for future work as may be required to prevent further problems occurring. **Call us** to find out more on **1300 367 333** or **Book Online** and **save 10%**
