

CLEANING

Our water blasting equipment uses high-speed water to take off dirt, mould and pollution to bring the face of the tile back to a stable, clean surface ready for painting.

REPAIRS

All broken tiles will be replaced and any other issues will be fixed prior to painting.

REPOINTING

Using the product FlexiPoint, all ridge capping and gable cement work will be pointed and re-bedded where needed.

PROTECTION

We use plastic sheets to protect walls, windows, pergola roofs and anything else around the area from overspray as needed.

SEALING

Once prepared properly, the roof needs a sealer before the colour coats of paint.

PAINTING

Two coats of paint are applied at this point. The type of paint used is determined by the condition of the roof and the needs of the client.

CLEANUP

To complete the roof restorations, all plastic protection sheets are removed, all job mess is cleaned up and all rubbish is taken away.
