Servicing of a Leaking Taps

When our plumbers are attending a leaking taps, they are trained to establish if the tap should be replaced completely, or a service of existing tapware will be required. If the tapware is older, servicing the taps is not normally a recommended option as we would advise they be replaced.

Leaking Taps Adelaide, Melbourne, Perth, Sydney, Brisbane, Canberra, Dripping Taps

Servicing existing taps never results in the perfect operation, as a new tap provides. Each of our vans carry Easy Clean tapware which is chrome in colour to suit nearly every bathroom, kitchen, and laundry application. When installing the new tapware we replace the existing cheaper black and white washers that are provided with new hydro seal washers. Hydro seals are a brass washer with an o ring as its rubber. Each time the tapware is replaced, we re-seat the face of the breacher or seat set, by using a re-seating tool, which will cut a new smooth seat to allow the hydro seal washer to sit on.

We replace the provided black and white tap washers as we find they fail, and by replacing them with a hydro seal washer, the customer does not have to pay for another attendance for a plumber to come and replace the tap washer on the new taps.

Another advantage of replacing the taps fully is there is less labour involved in replacing the tapware than servicing. This can often save the customer between fifteen minutes and half an hour in their labour costs, which normally contributes to a large percentage of the purchase of new tapware. Consult our plumbing professional regarding the best option for yourself next time you have leaking taps.

Servicing of Tapware

It is crucial that when repairing a leaking taps, that not just the tap washer is replaced, as a company procedure our plumbers will service your tapware fully. This will involve installing of a new hydro seal washer; replacing of o rings on the spindle, lubricating the spindle, cleaning of the female threads on the spindle, lubricating of cover flange/bell, tap re-seating, and replacement of body washers.

We service the tapware fully similar to when you have your car serviced and it has a faulty spark plug. You don't have just the spark plug replaced; you have the car fully serviced including oil and filters etc. It is similar to fixing a leaking tap where one specific part may have failed however it is essential to replace or repair all areas. It works out uncommercial to be calling a plumber out the following week to then replace the o rings, and then a couple of weeks later to change the body washers which may have been ok at the initial time of the leaking tap, however soon have failed.
