

Accessories

At Betta Tanks, we do a lot more than just selling water tanks and rainwater tanks! We supply and install a range of accessories to help you get the most out of your rainwater tank.

Talk to our expert team at Betta Tanks about how we can meet your requirements today!

Pressure Pumps

Your new rainwater tank, will need a good pressure pump so you can water your garden and keep it looking luscious.

A pressure pump will supply adequate water pressure on either one or two outlets and will provide ample water pressure for your garden watering needs.

Betta Tanks pressure pumps ensure simple installation. We will work with you to give you an optimum flow-rate.

Fire Pumps

Our fire pumps are part of a fire sprinkler system's water supply and will be connected to your water tank. The fire pump provides water flow at a higher pressure to the sprinkler system and hose standpipes.

For a safe and powerful water stream, the Betta Tank's fire pump will be tailored for your needs.

Hose Reels

Hose reels solve the messy, tangled hose problem. The hose reels in the Betta Tank product range are good quality, affordable and use.

Our hose reels come with a locking device to prevent your hose unwinding in transit and a rotating handle for rewinding.

Vortex Suction

Vortex suction is used to optimise the mixture of air and water in the pump, which left untreated may reduce the pump's effectiveness.

Rain Heads

Rain heads fight off leaves and debris keeping them away from the flow of water and ensuring any other little nasties are kept out of the system.

The implementation of a rain head ensures the watertank stays clean with minimal intervention from the owner.

First Flush

Similar to the function of a rain head, a first flush is a water diverter that acts as a purifier before you receive your water.

A first flush prevents the first flush of water which often contains unwanted material from the roof.

Tank Gauges

A tank gauge is a level indicator that tells you how much water is in your rainwater tank – it's as simple as that. A tank gauge is an in tell how much rainwater you've accumulated in your new rainwater tank.

A ball float is a device used to open the tank when the water level falls below a particular level, and vice versa.

Ball Floats are particularly useful in the peak of summer and winter when rainwater is scarce or at its maximum. Speak to us about

Leaf Eaters

Leaf eaters stops leaves and other debris from entering the rainwater tank when it's not raining. The leaf eater uses its flow direction to push the leaves it comes into contact with.

Once again, as the name suggests, gutter guards protect your gutters from unwanted material on your roof and in your tank. Block cause a wide range of problems – gutter guard is your solution.
